Accessing Linux File System

Storage Management Concept:

Storage devices are represented by a special file type called ***'block device'***. The block device is stored into ***'/dev'*** directory. In Redhat Enterprise Linux, the first SCSI, PATA/SATA or USB hard drive detected as ***'/dev/sda',*** and second hard drive detected as ***'/dev/sdb'*** and so on. In Linux first virtual disk are detected as **'/dev/vda'** or ***'/dev/xvda'***, and second virtual disk will detected as ***'/dev/vdb'*** or ***'/dev/xvdb'*** *and so on.*

The first partition will be the ***'/dev/sda1'*** and second partition will be ***'/dev/sda2'*** and so on.
